## Join World Fish Migration Day! 16 May 2020

*"Free-flowing, clean rivers are critical for sustaining healthy fish populations, and robust fish populations go hand-in-fin with healthy rivers. As the first vertebrates to enjoy mating, fish in healthy, unblocked rivers also get to experience the natural joy and satisfaction of spawning. Together, we can make a difference for the survival of these complex, migratory fish species."*

### Jonathan Balcombe

*author of the international bestseller 'What a Fish Knows'*
